VIEW PLOT RESULTS

Look at various plots that have Renk products in them. Select the year of the crop you want to see. Click on any pin to see the plot results.

COMPARE PRODUCTS

We invest in a lot of plots to assure customers have the best results. You can compare Renk products to other companies or select your current competitive product to see which Renk products could replace it.

Compare:

- ☐ Renk to Other Company
- ☐ Other Company to Renk

Select the type of comparison.

For:

- ☐ Corn
- ☐ Soybean

Choose the product.

Which Company to Compare to?

FIELD-DRIVEN RESEARCH: PERFORMANCE MEASURED WHERE IT MATTERS MOST

At Renk Seed, our commitment to your success starts in the field. We evaluate hybrids in real-world conditions across an extensive testing network that spans the Corn Belt. With hundreds of locations, we ensure every hybrid performs under the pressures unique to your region. By testing side-by-side with current market leaders, we select products that show a clear advantage.

We prioritize local data because every field is unique. What works in one area may not work in another, and our widespread testing gives us the insights needed to tailor our high-yielding products to specific regional needs of growers.

Renk Seed delivers industry-leading performance and reliability in its product lines. We partner with all major genetic and trait providers, while innovating through our own genetic corn breeding program. Rigorously tested in a variety of soil types, weather conditions, and management practices ensure our hybrids deliver the consistency and yield potential growers expect.
